Dear Sir,

Last August my cousin and I  
were outside looking at the stars; when  
we saw a white light with a white  
glow and it left of them were moving  
I did not see night nor saw the same  
thing, at the same place, at the same  
time. Another night we saw a white  
light appear in the sky among the stars  
all of a sudden it got red and  
turned a bright orange. During it  
went out. Later on the same night  
we saw a scaring green light moving  
terrificly fast. It was moving ahead  
of us when it quickly turned, unbeliev-  
ably fast and sharp. I did not wish to  
turn but turned like a corner of a  
square. Well this is not all I have  
found and then stopped thinking  
and started thinking of a tail of a  
comet in front of us. I looked  
very closely over our heads and  
saw a line of stars over the horizon.

it was only about twenty yards up  
in the sky. I did not make  
any sound, however. Please send  
information to the Editor of the  
Chronicle. I hope you can explain  
this, especially the green light.

Very truly yours,
